

# Forested ecozones across Canada

Canada has 362 million hectares of forests that support a wide range of social, cultural, economic and ecological services. Many of these services are monitored by the forest sector, often summarized and reported for administrative areas, such as the country, provinces and territories. But ecosystems do not follow administrative boundaries. That's why ecological classification systems such as the Terrestrial Ecozones of Canada are used by planners and ecologists to inform and support sustainable forest management initiatives across Canada's forest sector. Statistical reports for the first remeasurement of Canada's National Forest Inventory have been released. These reports are available by Terrestrial Ecozone and can be accessed on the National Forest Inventory website at <https://nfi.nfis.org/en/standardreports>.

## Forested ecozones

-  Pacific Maritime
-  Atlantic Maritime
-  Prairies
-  Taiga Cordillera
-  Boreal Cordillera
-  Montane Cordillera
-  Mixedwood Plains
-  Hudson Plains
-  Taiga Plains
-  Boreal Plains
-  Taiga Shield
-  Boreal Shield

## Non-forested ecozones

-  Arctic Cordillera
-  Northern Arctic
-  Southern Arctic

## Percent of ecozone forested
