

# ATTESTATION FORM

## Canada Greener Homes Grant

### Air Source Heat Pump or Cold Climate Air Source Heat Pump Design and Installation

**The purpose of this form** is to seek attestation from the mechanical system contractor/designer retained to design and install the heat pump system that:

- the heat pump system is capable of distributing heat throughout the **entire home**

**Note:** The heat pump system could work as a standalone system or in conjunction with an existing backup fossil fuel heating system. The heat pump system operates as the main heating system, only switching to the backup fossil fuel system when the heat pump has insufficient capacity and/or it is economically beneficial to do so.

**It is highly recommended that the homeowner:**

- have this form completed by the contractor retained to design and install the heat pump system

**For more information:** Natural Resources Canada has developed a package of materials related to air source heat pump sizing and selection, intended for use by mechanical system designers and renovation contractors.
