Subject: Question 2

In essence, this discussion paper describes (very poorly in my view) what boils down to a means of addressing two fundamental questions Whether to ? and How to ?, in the decision making process. Appointing Designated Officers makes sense and is essential to creating a timely response and thus a degree of Regulatory clarity for all “stakeholders” With respect to Q2 I see no mention of a criterion to address “broad public interest”, with an emphasis on ***broad***. A further criterion I suggest is to include :

Meeting the requirements of the Canadian Oil and Gas Pipeline Standard Z662 .

A third would be that the “Designated” Officer MUST hold a professional Designation such as P Eng , Pag or P Geol
